

Mark Scheme (Results)

Summer 2014

Pearson Edexcel International
Advanced Level
in Physics (WPH01)
Paper 01 Physics on the Go

Edexcel and BTEC Qualifications

Edexcel and BTEC qualifications are awarded by Pearson, the UK's largest awarding body. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at www.edexcel.com or www.btec.co.uk. Alternatively, you can get in touch with us using the details on our contact us page at www.edexcel.com/contactus.

Pearson: helping people progress, everywhere

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: www.pearson.com/uk

General Marking Guidance

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.

Mark Scheme Notes

Underlying principle

The mark scheme will clearly indicate the concept that is being rewarded, backed up by examples. It is not a set of model answers.

For example:

(iii)	<u>Horizontal force of hinge on table top</u> 66.3 (N) or 66 (N) and correct indication of direction [no ue] [Some examples of direction: acting from right (to left) / to the left / West / opposite direction to horizontal. May show direction by arrow. Do not accept a minus sign in front of number as direction.]	✓	1
-------	---	---	---

This has a clear statement of the principle for awarding the mark, supported by some examples illustrating acceptable boundaries.

1. Mark scheme format

- 1.1 You will not see 'wtte' (words to that effect). Alternative correct wording should be credited in every answer unless the ms has specified specific words that must be present. Such words will be indicated by underlining e.g. 'resonance'
- 1.2 Bold lower case will be used for emphasis.
- 1.3 Round brackets () indicate words that are not essential e.g. "(hence) distance is increased".
- 1.4 Square brackets [] indicate advice to examiners or examples e.g. [Do not accept gravity] [ecf].

2. Unit error penalties

- 2.1 A separate mark is not usually given for a unit but a missing or incorrect unit will normally mean that the final calculation mark will not be awarded.
- 2.2 Incorrect use of case e.g. 'Watt' or 'w' will **not** be penalised.
- 2.3 There will be no unit penalty applied in 'show that' questions or in any other question where the units to be used have been given, for example in a spreadsheet.
- 2.4 The same missing or incorrect unit will not be penalised more than once within one question (one clip in open).
- 2.5 Occasionally, it may be decided not to penalise a missing or incorrect unit e.g. the candidate may be calculating the gradient of a graph, resulting in a unit that is not one that should be known and is complex.
- 2.6 The mark scheme will indicate if no unit error penalty is to be applied by means of [no ue].

3. Significant figures

- 3.1 Use of an inappropriate number of significant figures in the theory papers will normally only be penalised in 'show that' questions where use of too few significant figures has resulted in the candidate not demonstrating the validity of the given answer.

- 3.2 The use of $g = 10 \text{ m s}^{-2}$ or 10 N kg^{-1} instead of 9.81 m s^{-2} or 9.81 N kg^{-1} will be penalised by one mark (but not more than once per clip). Accept 9.8 m s^{-2} or 9.8 N kg^{-1}

4. Calculations

- 4.1 Bald (i.e. no working shown) correct answers score full marks unless in a 'show that' question.
- 4.2 If a 'show that' question is worth 2 marks then both marks will be available for a reverse working; if it is worth 3 marks then only 2 will be available.
- 4.3 **use** of the formula means that the candidate demonstrates substitution of physically correct values, although there may be conversion errors e.g. power of 10 error.
- 4.4 **recall** of the correct formula will be awarded when the formula is seen or implied by substitution.
- 4.5 The mark scheme will show a correctly worked answer for illustration only.
- 4.6 Example of mark scheme for a calculation:

<u>'Show that' calculation of weight</u>		
Use of $L \times W \times H$	✓	
Substitution into density equation with a volume and density	✓	
Correct answer [49.4 (N)] to at least 3 sig fig. [No ue] [If 5040 g rounded to 5000 g or 5 kg, do not give 3 rd mark; if conversion to kg is omitted and then answer fudged, do not give 3 rd mark] [Bald answer scores 0, reverse calculation 2/3]	✓	
Example of answer: $80 \text{ cm} \times 50 \text{ cm} \times 1.8 \text{ cm} = 7200 \text{ cm}^3$ $7200 \text{ cm}^3 \times 0.70 \text{ g cm}^{-3} = 5040 \text{ g}$ $5040 \times 10^{-3} \text{ kg} \times 9.81 \text{ N/kg}$ $= 49.4 \text{ N}$		3

5. Quality of Written Communication

- 5.1 Indicated by QoWC in mark scheme. QWC – Work must be clear and organised in a logical manner using technical wording where appropriate.
- 5.2 Usually it is part of a max mark, the final mark not being awarded unless the QoWC condition has been satisfied.

6. Graphs

- 6.1 A mark given for axes requires both axes to be labelled with quantities and units, and drawn the correct way round.
- 6.2 Sometimes a separate mark will be given for units or for each axis if the units are complex. This will be indicated on the mark scheme.

- 6.3 A mark given for choosing a scale requires that the chosen scale allows all points to be plotted, spreads plotted points over more than half of each axis and is not an awkward scale e.g. multiples of 3, 7 etc.
- 6.4 Points should be plotted to within 1 mm.
- Check the two points furthest from the best line. If both OK award mark.
 - If either is 2 mm out do not award mark.
 - If both are 1 mm out do not award mark.
 - If either is 1 mm out then check another two and award mark if both of these OK, otherwise no mark.
- 6.5 For a line mark there must be a thin continuous line which is the best-fit line for the candidate's results.

Question Number	Answer	Mark
1	C	1
2	B	1
3	B	1
4	D	1
5	B	1
6	C	1
7	A	1
8	C	1
9	C	1
10	D	1

Question Number	Answer	Mark
11a	Malleable (1) (Large) plastic deformation Or the material does not return to its original shape (when the compressive force is removed) Or the material is permanently deformed (when the compressive force is removed) (1) (Treat references to tough as neutral in both marking points)	2
11b	Elastic behaviour Or does not deform plastically (for low stresses) (1) Returns to original shape/position (when the force/stress is removed) Or no permanent deformation (1)	2
Total for question 11		4

Question Number	Answer	Mark
*12	(QWC – work must be clear and organised in a logical manner using technical terminology where appropriate) Vertical velocity/motion is independent of the horizontal velocity/motion (1) The ball (always) has the same horizontal velocity as the skateboarder (1) The (only) force acting on the ball is weight/vertically (downwards) Or the (only) acceleration acting on the ball is vertically (downwards) Or there are no horizontal forces/acceleration (1) The idea that the ball and skateboarder are in the same horizontal position (relative to each other) e.g. the ball and the skateboarder have the same horizontal displacement/distance/position at the same time e.g. the ball will stay directly above the skateboarder (1)	4
Total for question 12		4

Question Number	Answer	Mark
13(a)	$mg = T \cos \theta$ (seen or substituted into) (1) Substitute into $mg = T \cos \theta$ (1) $T = 0.16$ (N) (1) <u>Example of calculation</u> $0.015 \text{ kg} \times 9.81 \text{ N kg}^{-1} = T \cos 20^\circ$ $T = 0.16 \text{ N}$	3
13(b)	$R = T \sin 20^\circ$ Or $R = mg \tan 20^\circ$ (seen or substituted into) Or use of Pythagoras (e.g. if terms added or subtracted) (1) Use of $R = T \sin 20^\circ$ Or $R = mg \tan 20^\circ$ Or correct use of Pythagoras (1) $R = 0.06 \text{ N}$ (ecf from (a)) (1) (Accept answers in the range $R = 0.05$ to 0.07 N) <u>Example of calculation</u> $R = 0.16 \text{ N} \times \sin 20^\circ$ $R = 0.055 \text{ N}$	3
13(c)	Force _{X on Y} = 0.06 (N) (ecf from (b)) (1) Due to N3 Or (repulsive) force of X on Y is equal (and opposite) to (repulsive) force of Y on X. (1) (do not award MP2 if candidates have linked their response to the idea of identical magnets)	2
Total for question 13		8

Question Number	Answer	Mark
14(a)	<p>Child's (resultant) velocity = 0 Or $+1.9 + (-1.9)$ Or $-1.9 + 1.9$ Or The child and the walkway have the same speed but in the opposite direction Or in 1 s the child will walk 1.9 m backward and the walkway moves 1.9 m forward (1)</p> <p>The idea that the child will appear (to a stationary observer) to stay in the same position on the walk way. (1)</p> <p><u>Examples of answers</u> The child has no displacement (MP2 only) Their velocity relative to the ground/start is zero (MP1 and MP2)</p>	2
14(b)(i)	<p>Use of $v = s/t$ (1)</p> <p>Use of trigonometry to find the height (12.3m) Or the component of the force acting along the slope (114 N) (1)</p> <p>Use of work done = force \times distance (1)</p> <p>Work done = 5400 (J) (1)</p> <p><u>Example of calculation</u> Distance walked along ramp = $1.90 \text{ m s}^{-1} \times 25.0 \text{ s} = 47.5 \text{ m}$ $F = 45.0 \text{ kg} \times 9.81 \text{ N kg}^{-1} \times \sin 15^\circ = 114.3 \text{ N}$ Work done = $F \times d = 114.3 \text{ N} \times 47.5 \text{ m} = 5429 \text{ J}$</p>	4
14(b)(ii)	<p>Work done to walk along the ramp = work done to climb the stairs Or use of 5400 = power \times 12 (1)</p> <p>Power = 450 W (ecf from (b)(i) for energy) (1)</p> <p>(P = 417 W using show that value)</p> <p><u>Example of calculation</u> Power = $\frac{5430 \text{ J}}{12 \text{ s}}$ Power = 453 W</p>	2
Total for question 14		8

Question Number	Answer	Mark
15(a)(i)	Mg Or mass of hanging masses \times g Or weight of hanging masses	(1) 1
15(a)(ii)	Use $s = ut + \frac{1}{2} at^2$ Or average velocity = s/t and use $a = (v-u)/t$ with $v = 2s/t$ With $u = 0$ ($s = \frac{1}{2} at^2$ scores both MP1 and MP2)	(1) (1) 2
15(a)(iii)	Both objects are being accelerated and not just the trolley Or the idea that the relationship between F and a is being investigated and so m must be constant/controlled Or so you get a straight line when F is plotted against a	(1) 1
15(b)(i)	Straight line through the origin	(1) 1
15(b)(ii)	Gradient = (total accelerated) mass (Do not award the mark if the candidate refers to the mass of the trolley, the hanging masses or the added masses)	(1) 1
15(c)	Max 2 from Parallax (Human) reaction time Knowing exact point it passes markers Zero error in stopwatch	(1) (1) (1) (1) 2
Total for question 15		8

Question Number	Answer	Mark
16(a)(i)	Use of density = mass/volume (1) Mass = 1.1×10^6 (kg) (1) <u>Example of calculation</u> Mass of water passing through turbines in 1 second = $1060 \text{ m}^3 \times 997 \text{ kg m}^{-3}$ Mass of water passing through turbines in 1 second = 1.06×10^6 kg	2
16(a)(ii)	Use of GPE = mgh Or GPE per second = $\frac{m}{t} \times g \times h$ (1) Power = 1.9×10^9 (W) (ecf) (1) (range 1.8 to 2.0 GW) <u>Example of calculation</u> GPE per second = $1.06 \times 10^6 \text{ kg s}^{-1} \times 9.81 \text{ N kg}^{-1} \times 185 \text{ m} = 1924 \text{ MJ s}^{-1}$ Power = 1.924 GW	2
16(a)(iii)	Use of 0.8 x either power or energy (1) Use of power = $\frac{\text{energy}}{\text{time}}$ with an attempt at a time conversion for the year (1) Total energy = 4.9×10^{16} J (ecf) (1) (accept answers in the range $(4.5 \text{ to } 5.1) \times 10^{16}$ J) <u>Example of calculation</u> Output power = $0.8 \times 1.924 \times 10^9 \text{ W} = 1.539 \times 10^9 \text{ W}$ $60 \text{ s} \times 60 \text{ s} \times 24 \text{ h} \times 365 \text{ days} = 31.54 \times 10^6 \text{ s}$ Total energy output in 1 year = $1.539 \times 10^9 \text{ W} \times 31.54 \times 10^6 \text{ s}$ = 4.86×10^{16} J	3
16(a)(iv)	The water still has a velocity after passing through the turbines Or energy is transferred (to surroundings) as thermal energy Or energy is dissipated (to surroundings) as heat Or work is done against friction Or friction acts between the water and the turbine/dam Or friction acts between moving parts (accept in bearings) (1) (Treat references to sound as neutral. Do not credit 'energy lost/wasted as...' but treat as neutral if within correct response)	1
16(b)	Max 2 Rate of flow of saltwater less (accept lower velocity/speed) (1) Less mass of (salt) water reaching turbine blades per sec (1) Greater transfer of energy (away from the salt water) due to more friction (1) (Salt) water has a lower (kinetic) energy on reaching the turbines (1) Turbine rotates at a lower speed (1) Less GPE converted to KE (1) Lower efficiency of the dam (1)	2
Total for question 16		10

Question Number	Answer	Mark
17(a)(i)	<p>Compression anywhere in the concrete layer (1)</p> <p>Tension anywhere in the steel beam (1)</p> <div style="text-align: center;">  <p>Compression</p> <p>Tension</p> </div> <p>(Do not award each marking point if the force is labelled in both materials)</p>	2
17(a)(ii)	<p>Concrete is strong under compression (1)</p> <p>Steel is strong under tension (and buckles under compression) Or has a high UTS (1)</p>	2
17(b)(i)	<p>Brittle (1)</p> <p>Undergoes little/no plastic deformation before breaking Or breaks just after limit of proportionality/elastic limit (1)</p>	2
17(b)(ii)	<p>Steel is ductile (1)</p> <p>At the elastic limit Or yield point (1)</p> <p>steel becomes plastic Or there is a large (increase in) strain for little/no stress Or little/no force produces a large (increase in) extension (1)</p> <p>steel would change shape/buckle/distort/neck/stretch Or steel would show permanent deformation Or the concrete would crack (1)</p>	4
17(c)(i)	<p>Use of $E = \frac{\sigma}{\epsilon}$ using points up (0.9, 155) Or use of the gradient of the linear section of the graph (1)</p> <p>$E = 177 \times 10^9 \text{ Pa}$ (1) (Accept answers in the range 170 to 180 GPa)</p> <p><u>Example of calculation</u> $E = \frac{150 \times 10^6 \text{ Pa}}{0.85 \times 10^{-3}}$ $E = 176.5 \times 10^9 \text{ Pa}$</p>	2

17(c)(ii)	<p><u>Elastic limit</u> point at which material stops behaving elastically Or point at which plastic behaviour/deformation begins Or beyond this point the material will no longer return to its original length if the (deforming) force is removed Or up to this point the material will return to its original length if the (deforming) force is removed</p> <p><u>Yield point</u> (Point at which) for little/no increase in load/force/stress there will be a large extension/strain</p>	<p>(1)</p> <p>(1)</p> <p>2</p>
Total for question 17		14

Question Number	Answer	Mark
18(a)(i)	Upthrust/U vertically upwards (1) Drag vertically downwards (1) (-1 for any additional forces if MP1 & MP2 awarded. Lines must be vertical by eye and touch the dot) 	2
18(a)(ii)	Upthrust – weight – drag = 0 Or weight + drag – upthrust = 0 (1)	1
*18(a)(iii)	<p>(QWC – work must be clear and organised in a logical manner using technical terminology where appropriate) Max 4 from</p> <ul style="list-style-type: none"> • Density of air decreases Or difference between the density of the air and the helium/gas/ in the ballon decreased (1) • Hence the upthrust decreases (1) (MP2 cannot be awarded without MP1 being attempted) • Volume of balloon/ displaced air/envelope increases (1) • This would increase the upthrust Or this would increase the weight of displaced fluid/air (1) (MP4 cannot be awarded without MP3 being attempted) • Effect of air density decreasing is greater than that of the volume increasing (1) • Changes in g are negligible (at these heights) Or air resistance/drag negligible (towards maximum height) (1) 	4
18(a)(iv)	Use of speed = distance/time Or attempt to find the gradient of the graph (using a pair of values from the graph) (1) Speed = 4.9 m s ⁻¹ (at least 2 SF) (1) (Accept answers in the range 4.75 m s ⁻¹ to 4.94 m s ⁻¹) <u>Example of calculation</u> Speed = $\frac{35\,000\text{ m}}{7200\text{ s}}$ Speed = 4.86 m s ⁻¹	2

18(b)(i)	Use of $v = u + at$ with $u = 0$ Or $s = ut + \frac{1}{2} at^2$ and $v^2 = u^2 + 2as$ with $u = 0$ $v = 491 \text{ (m s}^{-1}\text{)}$ <u>Example of calculation</u> $v = 0 + (9.81 \text{ N kg}^{-1} \times 50 \text{ s})$ $v = 490.5 \text{ m s}^{-1}$	(1) (1) 2
18(b)(ii)	Air resistance reduced his (downwards) acceleration Or Air resistance was acting on him Or Air resistance was not considered when calculating the speed Or 380 m s^{-1} is the terminal velocity Or this is when weight = drag (+ upthrust) Or this is when the resultant force is zero Or work done against frictional forces	(1) 1
18(c)	Use of max speed = $1.2 \times$ speed of sound Speed of sound = 317 m s^{-1} <u>Example of calculation</u> Speed of sound = $\frac{380 \text{ m s}^{-1}}{1.2}$ Speed of sound = 317 m s^{-1}	(1) (1) 2
